

New Web Company Announces Innovative Training Course Platform Targeting Electronics

We are pleased to announce the launch of a new web site here at

<http://www.finda-training-course.co.uk>.

October 2008

EMC Resources today unveiled **finda-training-course.co.uk**, an innovative [training course portal](#) specially designed by experienced electronic engineers to connect the Electrical and Electronic engineering sector with a comprehensive range of specialist Training Course providers and Consultants worldwide.

In a recent report issued by ELECTRA, the EU's industry policy group for the sector,

“the Electrical and Electronic engineering sector is an engine of economic growth in the EU, accounting for a turnover of about €320 billion a year and employing 2.8 million people in 18000 companies”

It goes on to say

“.....“the Electrical and Electronic engineering sector plays a significant role as a key driver of innovation in the EU. For instance by taking the lead in improving products' energy efficiency will boost Europe's economy, saving every consumer money and allowing everybody to contribute to reducing environmental damage.”

However the report highlights, as have many previous reports and articles, that this obviously important sector faces the challenge of a lack of “know-how” and skilled personnel.

Thus if the Electrical and Electronic engineering sector is to play the pivotal role in Europe's economy envisaged by this report; it is obvious that training in this vital sector must be addressed as a top priority.

A common theme of complaint when talking to experienced training officers is that finding the right training course, competitively priced, at a convenient time and venue is a considerable challenge; involving the time consuming activity of contacting dozens of independent providers.

The web based database at **finda-training-course.co.uk** alleviates this problem by allowing visitors to search by “topic”, “date” and “keyword” through nearly 300 training courses (with more being continually added) to find their exact requirements.

This brand new site focuses on continuing professional development (CPD) courses for the Electrical and Electronic engineering sector. Our comprehensive training course database contains hundreds of short (1 to 5 days duration) CPD courses that are suitable for all levels of staff involved in any aspect of electronics from Design & Development, through Production, Installation & Maintenance to End-of-life activities.

In addition the site contains a training course Directory that lists every course by topic. An enquiry can be made about each and every course by simply clicking on an interactive “Enquiry Button”; with a corresponding response containing more details.

Having selected the precise training course that fits your requirements, it is then common place to have to work through a bureaucratic registration process. This is avoided at many of the training courses in our portfolio due to the availability of a simple on-line registration process.

“The philosophy behind **finda-training-course.co.uk** is that we are developing a training course “hub” or “KTN (Knowledge Transfer Network)” for the sector” said Graham Mays MD of EMC Resources. “Thus we guarantee that ANY relevant training course submitted to us by a provider will be added to the database absolutely FREE of any charges”.
